2300Z	0530							2300 NA MS					2315 MR														2300Z

NOTES: A cell with dots in it indicates periods when my moon is over 50 degrees elevation - please try to work me before the moon gets so high!
 I may not stay on for those difficult periods if I don't see callers. In white cells with dots, I am totally unable to operate when the moon is so high.

Moonset and moonrise ground gain lobes will not be known for sure until the station is set up, but I do NOT expect to have lobes below zero degrees.

* During these days of lowest Degradation, I plan to be QRV from moonrise to moonset even when the elevation is high
